Work Record

Summary of task:

Complete and upload a Work record for the installation of Windows7 and the Anti-Virus Software.

Assignment Number: 2.3 Technician: Leandro Baroca

Task Number: 3 Criteria Number: 2P5 / 29P4

Environment: (Software): Windows 8.0

User Platform: (Hardware): x64

Detail of work carried out:

Build the stand alone PC

1. Firstly, I gathered the tools and equipment to build the PC and also gathered the parts of the computer
2. After that, I proceeded to add the motherboard, graphics card and the hard disk.
3. After installing those components, I added the network card, the RAM and the connections from the motherboard.
4. When the PC was built, I plugged in all the ports and turned it on to check if it was working, and in the end the PC worked without errors.

Install Windows 8

1. Firstly, I inserted the Windows 8 OS disc into the CD ROM on the PC and reset the PC.

2. Then, I opened the BIOS and changed the order of the reading, making the CD ROM first and the hard drive second.
3. After the computer started the installation of Windows 8, I chose the custom build and then it started installing the Windows 8 OS.
4. Lastly, after the installation of Windows 8 was complete, I personalized my PC and created a user account.

Install NIC

1. Firstly, I turned the computer off and checked if it was fully off so it's safe to dismantle the PC to install the NIC.
2. After the PC was fully turned off, I took off the cover for the PC case and removed all the connections so I have enough free space to install the NIC.
3. Afterwards, I installed the NIC into the appropriate slot and reconnected all the connections and mantled the PC back together.
4. Lastly, I connected the PC to the power and turned it on to check if the NIC works and in the end it did have a good connection and it worked.

Install Anti-Virus Software

1. Firstly, I inserted the Anti-virus DVD in the CD ROM and copied the Anti-virus software to the desktop.
2. I opened the application, and I selected the basic Antivirus protection and the standard installation.
3. Afterwards, I read and accepted the terms and conditions, and it started the installation.
4. After the installation, it started downloading the software files, I clicked finish and then the software was up and running .

Work Record

Summary of task:

Complete and upload a Work record for the upgrade of the Anti-Virus Software and Windows updates.

Assignment Number: 2.3 Technician: Leandro Baroca

Task Number: 4 Criteria Number: 29P4

Environment: (Software): Windows 8.0

User Platform: (Hardware): x64

Detail of work carried out:

Upgrade Anti-Virus Software

1. After the installation of the Anti-Virus software I closed the installation window and opened the Anti-Virus software.
2. When the Anti-Virus software required an update, I connected the ethernet cable to the PC for internet access.
3. When the PC got internet access the Anti-Virus software started updating.
4. After the update of the Anti-Virus software update, the software was working like intended.

Apply latest windows update

1. After the installation of the Windows 8.0 OS, I checked for the latest Windows update for the PC.
2. After checking for an update, I found the latest version of Windows 8.0 and started installing the Windows update.
3. When the update was installed the PC rebooted with the latest Windows update.
4. When the PC booted up the OS I went to check if it was the latest version and it was and the PC was fully working.

Work Record

Summary of task:

Configure a computer system to meet user needs

Assignment Number: 2.3 Technician: Leandro Baroca

Task Number: 5 Criteria Number: 29P5

Environment: (Software): Windows 8.0

User Platform: (Hardware): x64

Detail of work carried out:

Create user accounts

1. When the Windows 8.0 OS was installed on the PC, I went to create the user accounts for the PC.
2. Firstly, I created the administrator accounts which were the Manager and Student accounts.
3. Afterwards, I created the standard account which was the Staff account.
4. Lastly, I checked if the accounts were the correct name and the correct permissions and in the end it was all how it should be.

Create an appropriate file structure

1. On the PC with the newly installed Windows 8.0 OS, I had to make a folder structure to store business information.
2. I opened the documents of the PC and created the 3 folders: Marketing, Correspondence and Personal.
3. After I created those folders, I had to make sure that they were accessible by all users on the PC.
4. Lastly, I checked that they were accessible by all the users on the PC and they were the correct folder name.

Configure the Network adapter to access the internet

1. Firstly, I collected an ethernet cable and connected it to the port on the wall and then to the port on the PC.
2. After that, I checked that the indicator lit up and that there was a connection option on the PC.
3. Then, I connected the PC to the network by accessing the network settings and connecting to the network.
4. After the PC connected to it, I went into the network settings to check if I had full internet access and in the end it did have full internet access.
